

# **Vet - Light** **Phototherapy Devices**

- Patient:** The patient was presented with a chronic, painful, infected and necrotic tail.
- Treatment:** Phototherapy was done once a day, for 3 minutes for the first 5 days and thereafter every second or third day.
- Outcome:** The tail healed within 4 weeks with tissue filling in the defect. After 8 weeks the tail was fully recovered with minimal scar tissue present.

**Presenting wound**

**4 Weeks later**

**8 Weeks later**
