

Case Study 6

Venous Insufficiency 2

Patient:

77 year old female

History:

Small trauma wound was treated for 93 days with Intra Site Gel and was not healing.

Treatment:

Light therapy was done for 3 minutes, once a day (the wound was now covered with a amorphous hydrogel and a foam on top). No compression bandage was used on this patient.

Outcome:

The wound took a total of 22 days to heal with the use of light therapy whereas it was not healing before for over 3 months.
